WHAT IS ICO?

It refers to a token offering from a company or organization in order to raise capital for a project. ICOs are largely unregulated, thus putting investors at risk.

WHAT IS STO?

A token offering that is similar to an ICO but it is regulated.

Benefits of STO over ICO

Token Usage: Companies define a use case for their tokens in order to raise money. However, only a small portion of it is needed to maintain the network.
STOs Solution: No need for founders to invest in a use case for tokens to raise money. All tokens are backed up by particular assets.

Investor Rights: Investors can't distribute or gain profits as they don't have any rights. There isn't any security promise in situations like hacks or stolen account information.
STOs Solution: Offers legal rights such as voting or revenue distribution. Added security for stolen assets.

Reduced Scam Risk: Over 80% of ICOs are scams. Many investors lose their valuable money as there isn't any legal documentation trail.
STOs Solution: Offers a much transparent fundraising solution for both the company and the investors.

ISSUES WITH STO

- Need for Administration and Extra Cost** STO needs official registration through financial authorities, which increases the legal costs.
- Still Not a Popular Option** Major exchanges aren't supporting STOs yet. However, some of them have started to open up.
